How To Make A Strong Password; The subject matter disclosed herein relates generally to surgical methods and apparatuses, and more particularly to instruments and methods for re-positioning tissue. In laparoscopic and other minimally invasive procedures, such as laparoscopic or robotic-assisted surgery, surgical instruments may be inserted through small openings in the body, e.g., an opening in the abdominal wall or via a cannula inserted through the patient's skin. The surgical instruments can include clamps, graspers, scissors, staplers, cutting elements, and other types of surgical instruments. Minimally invasive procedures may be performed to treat various conditions afflicting the human body. For example, minimally invasive procedures may be used to treat various types of cancer, such as cancer of the prostate, kidney, breast, liver, lung, pancreas, ovary, stomach, bladder, uterus, cervix, thymus, testis, etc. In some cases, minimally invasive procedures are preferred over traditional open surgeries. In some cases, minimally invasive procedures may reduce patient recovery time and may reduce patient pain and other complications. Minimally invasive surgical procedures generally rely on various forms of imaging to provide images of a patient's anatomy during the procedures. These images may be used during surgery for any number of purposes including planning and assessment of results. In some instances, images may be used to provide feedback to a surgeon or other clinician for example to confirm that a particular instrument is in the proper location for performing a procedure 82157476af
